Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a messaging application, users maintain a contact list with names and corresponding phone numbers. Develop a program to manage this contact list using a dictionary implemented with hashing.

The program allows users to add contacts, delete contacts, and check if a specific contact exists. Additionally, it provides an option to print the contact list in the order of insertion.

Input Format

The first line consists of an integer n, representing the number of contact pairs to be inserted.

Each of the next n lines consists of two strings separated by a space: the name of the contact (key) and the corresponding phone number (value).

The last line contains a string k, representing the contact to be checked or removed.

Output Format

If the given contact exists in the dictionary:

1. The first line prints "The given key is removed!" after removing it.
2. The next n - 1 lines print the updated contact list in the format: "Key: X; Value: Y" where X represents the contact's name and Y represents the phone number.

If the given contact does not exist in the dictionary:

1. The first line prints "The given key is not found!".
2. The next n lines print the original contact list in the format: "Key: X; Value: Y" where X represents the contact's name and Y represents the phone number.

Refer to the sample outputs for the formatting specifications.

Sample Test Case

Input: 3
Alice 1234567890
Bob 9876543210
Charlie 4567890123
Bob

Output: The given key is removed!
Key: Alice; Value: 1234567890
Key: Charlie; Value: 4567890123

Answer

```
// You are using GCC
#include<stdio.h>
#include<string.h>
#define MAX_CONTACTS 50
#define MAX_NAME_LEN 11
#define MAX_PHONE_LEN 11
```

```
typedef struct{
   char name[MAX_NAME_LEN];
   char phone[MAX_PHONE_LEN];
}contact;

int remove_contact(contact contacts[],int *size,const char *name_to_remove){
   for(int i=0;i<*size;i++){
      if(strcmp(contacts[i].name,name_to_remove)==0){
         for(int j=i;j<(*size) -1;j++){
            contacts[j]=contacts[j+1];
         }
         (*size)--;
         return 1;
      }
   }
   return 0;
}
void print_contacts(contact contacts[],int size){
   for(int i=0;i<size;i++){
      printf("Key: %s; Value: %s\n",contacts[i].name,contacts[i].phone);
   }
}
int main(){
   int n;
   scanf("%d",&n);
   contact contacts[MAX_CONTACTS];
   int size=0;
   for(int i=0;i<n;i++){
      scanf("%s %s",contacts[size].name,contacts[size].phone);
      size++;
   }

   char name_to_check[MAX_NAME_LEN];
   scanf("%s",name_to_check);

   if(remove_contact(contacts,&size,name_to_check)){
      printf("The given key is removed!\n");
   }else{
      printf("The given key is not found!\n");
   }
   print_contacts(contacts,size);
```

```
    return 0;
}
```

Status : Correct ***Marks : 10/10***
